

Harmonization

across studies, samples,
ecological settings, and designs

Richer dynamics

linear/nonlinear,
parametric/nonparametric
(e.g., machine learning),
time-invariant/time-varying

Dynamic synthesis platform

person-specific dynamic signatures

uncertainty-aware synthesis

population-level inference

Integration

across self-report, sensors,
physiology, and passive data

Substantive targets

risk, resilience, outcomes,
and intervention-relevant
dynamic signatures
